22. network-end2end

The End-to-end Layer

- overview(P39)

- **Famous Transport Protocols(P40)**

- **Assurance of End-to-end Protocol(P41)**

  - **1. Assurance of At-least-once Delivery(P42-43)**

  - **How to Decide Timeout(P44)**

    - **Fixed Timer is Evil(P45-46)**

    - **Calculating RTT and Timeout (in TCP)(P51)**

  - **2. Assurance of At-most-once Delivery(next P6)**

    - **Duplicate Suppression(P7-8)**

  - **3. Assurance of Data Integrity(P9)**

  - **4. Segments and Reassembly of Long Messages(P10)**

    - **When Out of Order(P11)**

  - **5. Assurance of Jitter Control(P13-14)**

  - **6. Assurance of Authenticity and Privacy(P15)**

    - **6. Security: Asymmetric Encryption(P16)**

  - **7. End-to-end Performance(P17)**

    - **Overlapping Transmissions(P18-19)**

    - **Fixed Window(P20)**

    - **Sliding Window(P21)**

    - **Handling Packet Loss(P22)**

    - **Chose the Right Window Size(P23-24)**

    - **Self-pacing: Sliding Window Size(P25)**

TCP and Congestion Control

- **Congestion overview(P27)**

- Congestion 为什么会引起性能下降（P29）

- **Load Shedding: Setting Window Size（P30）**

- **Congestion Control（P31）**

- **AIMD (Additive Increase, Multiplicative Decrease)（P32）**

  - **Problems with AIMD（P33）**

  - **TCP Slow Start（P34）**

  - TCP Fast Retransmit / Fast Recovery（P35-36）

  - **Retrofitting TCP（P38）**

  - **AIMD Leads to Efficiency and Fairness（P40）**

- **Weakness of TCP（P42）**

-
